

DECLARATION

I,

\$\$YOUR NAME\$\$, hereby declare that the Summer Training Project Report titled "**STRATEGIC ANALYSIS OF DRUMS FOOD INTERNATIONAL (EPIGAMIA)**" submitted to \$\$NAME OF UNIVERSITY\$\$

in partial fulfillment of the requirements for the award of the degree of \$\$MBA/BBA\$\$ is a record of original research work carried out by me.

I further declare that the work reported in this project has not been submitted and will not be submitted, either in part or in full, for the award of any other degree or diploma in this or any other institute or university.

Place:

\$\$City\$\$\$\$YOUR SIGNATURE\$\$

Date:

\$\$Date\$\$\$\$YOUR NAME\$\$

Bonafide Certificate

Certified that this project report titled.....is the Bonafide work of Mr./Ms.....who carried out the research under my supervision. Certified further, that to the best of my knowledge the work reported herein does not form part of any other project report or dissertation on the basis of which a degree or award was conferred on an earlier occasion on this or any other candidate.

(Name of the project guide)

EXECUTIVE SUMMARY

The Indian Fast-Moving Consumer Goods (FMCG) sector is undergoing a paradigm shift, transitioning from traditional volume-based consumption to value-added, health-centric choices. This report provides a comprehensive strategic analysis of Epigamia (Drums Food International Pvt. Ltd.), the brand credited with creating the "Greek Yogurt" category in India.

Launched in 2015, Epigamia disrupted the dairy market by positioning yogurt not as a meal accompaniment, but as a high-protein, on-the-go snack. This study dissects the strategic maneuvers that allowed a startup to capture significant market share from incumbents like Amul and Nestle. It explores the brand's journey from its ice-cream parlor roots (Hokey Pokey) to its current status as a premium dairy leader backed by investors like Danone Manifesto Ventures and Verlinvest.

The research methodology relies on secondary data, industry reports, and nutritional benchmarking to evaluate the company's "Asset-Light" manufacturing model, cold-chain logistics, and premium pricing strategy. Key findings indicate that while Epigamia dominates the urban premium segment

through product innovation and digital-first marketing (including the "Deepika Padukone Effect"), it faces stiff competition from value-players like Milky Mist.

Financial analysis reveals a strategic pivot from "growth at all costs" to sustainable unit economics, driven by the rise of Quick Commerce (Blinkit/Zepto). The report concludes with recommendations for the new leadership team—following the tragic demise of founder Rohan Mirchandani in late 2024—to defend their market moat through continued innovation and to explore international expansion into the Middle East.

CHAPTER 1

INTRODUCTION

1.1 INTRODUCTION TO THE INDUSTRY

The global dairy industry stands as a colossus in the food and beverage sector, serving as a primary source of nutrition for billions. Within this vast domain, the Indian dairy industry occupies a unique and dominant position. India is currently the largest producer of milk globally, accounting for approximately 24% of the world's total milk production.¹ The sector contributes significantly to the national economy, accounting for about 5% of India's GDP and supporting the livelihoods of over 80 million rural households.² This foundational strength provides a robust supply base for value-added innovations, which is the primary focus of this report.

1.1.1 The Global Scenario Globally, the dairy market has matured significantly beyond liquid milk. In Western markets like the United States and Europe, and increasingly in East Asian markets like Japan, the consumption of Value-Added Dairy Products (VADP)—specifically yogurt, cheese, and probiotics—has outpaced liquid milk consumption. The global Greek Yogurt market, in particular, has witnessed explosive growth over the last two decades. Companies like Chobani in the US revolutionized the aisle by introducing strained yogurt, which is thicker, creamier, and higher in protein than traditional yogurt. This shift was driven by a consumer transition towards "clean label" foods—products with fewer ingredients, no preservatives, and functional health benefits. The global Greek Yogurt market size was estimated at USD 34.75 billion in 2024 and is projected to reach over USD 55 billion by 2030, growing at a CAGR of 8.2%.³ This global trend provided a clear roadmap for emerging markets like India, where the latent demand

for protein-rich, convenient snacks was beginning to surface.

1.1.2 The Indian Scenario: From Tradition to Modernity

Historically, India has been a market of "curd" (*dahi*), not "yogurt." Dahi is a staple dietary component, traditionally prepared at home daily. It is consumed as an accompaniment to meals (rice, roti) rather than as a standalone snack. The commercial market was largely dominated by unorganized local players and regional cooperatives selling loose dahi or basic packaged pouches.

However, the last decade (2015-2025) has witnessed a paradigm shift. The Indian dairy market is moving up the value chain. Several macro-economic and social factors are driving this transition:

- **Rising Disposable Incomes:** As per economic data, the Indian middle class is expanding, with higher

purchasing power allowing for the consumption of premium food products.

- **Urbanization & Convenience:** Rapid urbanization in metros like Mumbai, Delhi, and Bangalore has led to faster-paced lifestyles. The traditional practice of setting dahi at home is declining among young professionals due to time constraints, driving the demand for packaged yogurt.⁴
- **Health Consciousness & Protein Awareness:** There is a growing awareness of the "protein gap" in Indian diets, which are typically carbohydrate-heavy. Consumers are actively seeking vegetarian protein sources. This has created a fertile ground for Greek Yogurt, which naturally contains higher protein levels due to the straining process.
- **Cold Chain Infrastructure Development:** The expansion of reliable cold chain logistics and the proliferation of Modern Trade outlets (supermarkets) and Quick Commerce platforms (Zepto, Blinkit) have made it possible to distribute

temperature-sensitive products like fresh yogurt to a wider audience.⁵

1.1.3 Market Dynamics of Value-Added Dairy

The "Value-Added" segment is the fastest-growing component of the Indian dairy industry. While liquid milk grows at a steady rate mirroring population growth, segments like flavored yogurt, cheese, and UHT milk are growing at double-digit rates.

- **Market Size:** The India Yogurt Market was valued at USD 30.34 Billion in 2024 and is expected to reach USD 36.78 Billion by 2030, growing at a CAGR of 3.26%.⁴ However, the *flavored and frozen* yogurt sub-segment is projected to grow much faster, with some estimates suggesting a CAGR of over 13% to 19% in the coming years.⁶
- **Category Segmentation:** The market is segmenting into distinct categories:
 - *Functional Yogurts:* Probiotics for gut health

(pioneered by Yakult and Amul).

- *Snacking Yogurts*: Greek yogurts and fruit-flavored yogurts (led by Epigamia, Nestle).
- *Dessert Yogurts*: Mishti Doi and Shrikhand (Mother Dairy, Amul).

In this evolving landscape, new-age D2C (Direct-to-Consumer) brands are challenging the hegemony of legacy cooperatives (Amul, Mother Dairy) by focusing on niche, high-margin segments rather than mass-market volume. Epigamia (Drums Food International) is the vanguard of this movement, having single-handedly created the Greek Yogurt category in India.

1.2 PURPOSE OF THE REPORT

This research report has been commissioned and created to provide a comprehensive, 360-degree analysis of Epigamia's business model and its strategic positioning within the Indian dairy sector. As a student of Business Administration, studying Epigamia offers a

unique opportunity to understand "Category Creation"—a distinct marketing challenge where a brand must not only sell its product but also educate the consumer about why they need the product category in the first place.

The report serves multiple analytical purposes:

1. **Strategic Deconstruction:** To understand how a startup with limited capital compared to dairy giants utilized "Guerrilla Marketing" and digital-first strategies to build a premium brand.
2. **Operational Insight:** To investigate the complexities of managing a fresh food supply chain in India. Unlike ambient products (biscuits, chips), yogurt requires a continuous cold chain (0-4°C). Analyzing how Epigamia manages this "farm-to-fridge" logistics provides deep insights into operations management.⁸

3. **Financial Evaluation:** To trace the journey from high-burn growth (funded by venture capital) to sustainable unit economics. Understanding this pivot is crucial for any student of modern finance and entrepreneurship.
4. **Competitive Benchmarking:** To assess the sustainability of Epigamia's competitive advantage in 2025-2026, as legacy players with deeper distribution networks enter the Greek Yogurt space.

1.3 OBJECTIVES OF THE STUDY

The specific objectives of this research project are outlined below:

- **To analyze the comprehensive marketing strategy of Epigamia:** specifically focusing on the 4Ps (Product, Price, Place, Promotion) and how they have been adapted for the Indian market.
- **To evaluate the operational challenges of the cold chain:** and understand the technological interventions (IoT, data analytics) used by the company to minimize spoilage and ensure product

quality.

- **To conduct a comparative analysis:** of Epigamia against key competitors like Nestle a+ Grekyo, Milky Mist, and Mother Dairy, focusing on nutritional content, pricing strategies, and market share.
- **To understand the financial trajectory:** by analyzing funding rounds, investor profiles (Danone, Verlinvest), and the recent strategic shift towards profitability and EBITDA positivity.
- **To identify future growth avenues:** specifically examining the potential of the plant-based (vegan) dairy alternatives and expansion into Tier-2 and Tier-3 cities.

1.4 SCOPE OF THE STUDY

The scope of this report is defined by the following parameters:

- **Subject Scope:** The study is strictly focused on **Drums Food International Pvt. Ltd.** and its flagship brand **Epigamia**. While parent company

background is included, the primary analysis is on the consumer-facing brand.

- **Geographical Scope:** The analysis primarily covers the Indian domestic market. While Epigamia has export potential, the current scope focuses on its operations in major Indian metros (Mumbai, Delhi NCR, Bangalore, Hyderabad, Chennai) and its emerging presence in Tier-2 cities.
- **Time Frame:** The study analyzes data from the company's inception in 2015 through to the most recent available financial and operational data from FY 2024-2025, with forecasts extending to 2030.
- **Functional Scope:** The report integrates insights from multiple business disciplines:
 - *Marketing:* Brand positioning, digital campaigns, influencer strategy.
 - *Operations:* Supply chain, manufacturing, logistics.
 - *Finance:* Funding, revenue models, unit economics.

- *Strategic Management*: SWOT analysis, competitive strategy.

CHAPTER 2

COMPANY PROFILE

2.1 COMPANY BACKGROUND

Drums Food International Pvt. Ltd. is a new-age FMCG company headquartered in Mumbai, Maharashtra. It is best known for its flagship brand, **Epigamia**, which has become synonymous with Greek Yogurt in India. The company represents the new wave of Indian food startups that combine global food trends with local consumer insights.

2.1.1 Genesis and Evolution (The Pre-Epigamia Era)

The story of Epigamia begins not with yogurt, but with ice cream. The company was founded in 2008 by **Rohan Mirchandani**, an NYU and Wharton alumnus, along with **Uday Thakker**, **Rahul Jain**, and Chef **Ganesh Krishnamoorthy**.⁹ Initially, they launched a premium ice cream brand called **Hokey Pokey**.

Modeled after the "Cold Stone Creamery" concept, Hokey Pokey operated parlors where ice cream was mixed with toppings on a frozen granite stone.

While Hokey Pokey gained popularity for its taste and quality, the founders soon encountered the harsh reality of the ice cream business in India: extreme seasonality. Sales would peak in summer but plummet during the monsoons and winters. The high rental costs of parlors and the seasonal revenue dips made scaling difficult. The team realized that to build a massive, scalable FMCG business, they needed a product that was a "daily essential"—something consumers would eat year-round, regardless of the weather.¹⁰

2.1.2 The Pivot to Epigamia (2015)

The "Eureka" moment arrived when Chef Ganesh began experimenting with strained yogurt in the Hokey Pokey kitchen. The team realized that Greek Yogurt—which is high in protein, low in fat, and has a thick,

creamy texture—was a massive trend in the West (thanks to Chobani) but was virtually non-existent in the Indian branded market. Indian consumers were eating *dahi*, but there was a "white space" for a product that sat between health and indulgence.

In June 2015, Drums Food International launched **Epigamia Greek Yogurt**. The name "Epigamia" is derived from Ancient Greek, meaning "a way to formalize the relationship between different nations," symbolizing the marriage of traditional Indian milk with modern Greek processing techniques.

2.1.3 Growth and Funding History

Epigamia's growth has been fueled by a series of strategic funding rounds, attracting some of the most marquee names in global consumer investing.

- **Series A (2016):** Raised nearly USD 6.6 million led by **Verlinvest**, a Belgian consumer-focused investment firm (famous for investing in Oatly and

Vita Coco), and **DSG Consumer Partners**. This round validated the concept.¹¹

- **Series B (2017):** Raised INR 900 million (approx. USD 12 million) to expand distribution and manufacturing capacity.
- **Series C (2019):** A landmark round where **Danone Manifesto Ventures**, the venture arm of the French dairy giant Danone, made its first investment in Asia by backing Epigamia. This provided Epigamia with not just capital but deep technical expertise in dairy processing.¹²
- **Celebrity Investment:** Bollywood superstar **Deepika Padukone** invested in the company, becoming a strategic advisor and brand ambassador. Her involvement was crucial in catapulting the brand into mainstream consciousness.¹³
- **Debt Funding (2022-2023):** As the startup ecosystem shifted focus from "growth at all costs" to sustainability, Epigamia raised INR 350 million in

venture debt from **Anicut Capital** to fund working capital and path-to-profitability initiatives.¹⁴

2.2 MISSION AND VISION

Mission: "To contemporize traditional Indian food through innovation, making it healthier and more convenient for the modern consumer without compromising on taste." Epigamia aims to be a "Master Brand" for fresh and healthy food in India, challenging the notion that healthy food cannot be tasty.¹³

Vision:

"To challenge the boundaries of what is possible in the packaged food space, creating products with an Indian DNA that match or exceed global standards in quality and nutrition."

The vision extends beyond just selling yogurt; it is about promoting a healthier lifestyle and building a brand that is loved and trusted by millions of Indian households.

Core Values:

- **Innovation:** Constantly pushing the envelope (e.g., launching lactose-free curd).
- **Quality:** No preservatives, no artificial flavors.
- **Sustainability:** Commitment to plastic neutrality and ethical sourcing.

2.3 PRODUCT PROFILE

Epigamia's product portfolio has evolved from a single Greek Yogurt cup to a diverse range of value-added dairy and plant-based products. The portfolio is unified by the "Health + Taste" proposition.

2.3.1 Greek Yogurt (The Core)

- **Natural Greek Yogurt:** The hero product. Contains no added sugar, is high in protein (8g per cup), and is low in fat. It is positioned as a versatile ingredient (for smoothies, dips, marinades) and a healthy

snack.

- **Flavored Greek Yogurt:** Available in flavors like Blueberry, Strawberry, Alphonso Mango, and Wild Raspberry. These use real fruit pulp and contain zero preservatives.
- **Snack Packs:** Yogurt with mix-ins (like granola or fruit chunks) in a dual-compartment cup, targeting the on-the-go breakfast occasion.

2.3.2 Beverages

- **Greek Yogurt Smoothies:** A drinkable version of the yogurt, addressing the convenience factor. High protein and lactose-free.
- **Milkshakes:** Premium milkshakes positioned as indulgent treats but with cleaner ingredients than competitors.

2.3.3 Traditional Innovations

- **Epigamia Artisanal Curd:** A landmark innovation. This was India's first branded **Lactose-Free Curd**.

It addresses a massive latent need, as nearly 60-70% of Indians have some degree of lactose intolerance but continue to consume dairy heavily, often suffering in silence. This product allows them to enjoy dahi without digestive issues.¹⁵

- **Mishti Doi:** A healthier take on the traditional Bengali dessert, using caramelization for flavor rather than excessive sugar.

2.3.4 Plant-Based Range

Recognizing the global shift towards veganism and sustainability, Epigamia launched a plant-based line:

- **Coconut Milk Yogurt:** Dairy-free, vegan-friendly yogurt made from coconut milk.
- **Almond Milk:** Unsweetened and flavored variants.

This range targets the ultra-niche but highly influential vegan and flexitarian demographic in top metros.

2.3.5 The "Turbo" Range Targeting the fitness and gym-goer demographic, the "Turbo" sub-brand features products with amplified protein content (e.g., milkshakes with 25-30g of protein), competing directly with protein supplement brands.¹⁶

Table 2.2: Product Portfolio Breakdown

Category	Key Products	Target Need
Greek Yogurt	Natural, Blueberry, Mango, Strawberry	Healthy Snacking, Protein
Traditional	Artisanal Curd (Lactose-Free), Mishti Doi	Daily Consumption, Digestion
Beverages	Smoothies, Milkshakes,	On-the-go Convenience

	Almond Milk	
Plant-Based	Coconut Yogurt, Almond Beverage	Vegan, Lactose Intolerance
Performance	Turbo Protein Shakes (30g Protein)	Post-workout recovery

2.4 ORGANIZATIONAL STRUCTURE

Drums Food International operates with a professional, hierarchical structure that balances entrepreneurial agility with corporate governance.

Leadership Team:

- **Rahul Jain (CEO):** Elevated to the role of Chief Executive Officer in late 2023. He oversees the overall business strategy, P&L, and growth initiatives.¹⁷

- **Rohan Mirchandani (Co-Founder & Chairman):** The face of the brand and the visionary behind the pivot to Greek Yogurt. He focuses on long-term strategy, investor relations, and brand philosophy.
- **Ankur Goel (COO):** Responsible for the complex supply chain, manufacturing operations, and ensuring the cold chain integrity.
- **Uday Thakker (Director):** Focuses on strategic partnerships and new business development.
- **Isha Dhoble (VP Marketing):** Leads the digital-first marketing strategy and brand communication.¹⁸

2.5 MARKET PRESENCE

Geographical Footprint:

Epigamia employs a "Depth over Breadth" strategy. Rather than spreading thin across the entire country, it focuses on dominating key urban clusters where its target audience resides.

- **Top 5 Metros:** Mumbai (HQ), Delhi NCR, Bangalore, Hyderabad, and Chennai account for the vast

majority of sales. The brand is ubiquitous in these cities.

- **Expansion:** The company is currently present in over 30 towns and is strategically expanding into Tier-2 cities like Pune, Chandigarh, Ahmedabad, and Kolkata.
- **Retail Reach:** Epigamia products are sold at over **20,000 retail touchpoints**. This includes premium Modern Trade outlets (Nature's Basket, Foodhall), supermarket chains (Reliance Fresh, More, DMart), and select "A-Class" General Trade (Kirana) stores that possess reliable refrigeration.¹⁸

Distribution Channels:

- **Offline Retail:** Still contributes to the majority of volume (approx. 55-60%).
- **Online / Quick Commerce:** A massive growth driver. Platforms like **Blinkit, Zepto, and Swiggy Instamart** have become critical for Epigamia. The "10-minute delivery" model perfectly suits the

impulse nature of snacking and solves the cold-chain issue for the last mile. Online channels now contribute nearly 40-45% of total revenue, a remarkably high figure for an FMCG brand.¹⁹

CHAPTER 3

RESEARCH METHODOLOGY

3.1 RESEARCH DESIGN

The research design adopted for this project is **Descriptive and Analytical** in nature. The objective is not merely to describe the state of Epigamia's business but to analyze the underlying causes of its success and the challenges it faces.

- **Descriptive Research:** This phase involved mapping the company's profile, its product range, the structure of the Indian dairy industry, and the demographic profile of the target consumer. This provides the "What" and "Where" of the study.
- **Analytical Research:** This phase focused on the "Why" and "How." It involved critically evaluating the marketing mix, comparing unit economics with competitors, and assessing the efficacy of the supply chain model. The study analyzes

relationships between variables, such as the correlation between rising disposable income and the demand for protein-rich foods.

3.2 DATA COLLECTION

To ensure the comprehensive nature of this report, a multi-pronged data collection strategy was employed, utilizing both secondary data and simulated primary insights.

3.2.1 Secondary Data Sources

The backbone of this report is formed by extensive secondary research from high-credibility sources:

- **Industry Reports:** Data on market size, CAGR, and consumer trends was sourced from global research firms like **Euromonitor International, IMARC Group, TechSci Research, and Mordor Intelligence**.⁴ These reports provided the macro-economic context.

- **Company Filings & Databases:** Financial health, funding history, and investor details were extracted from corporate databases like **Tracxn**, **Crunchbase**, and **Screener.in**.²¹ This ensured the accuracy of financial figures and valuation estimates.
- **Leadership Interviews:** Direct insights from the leadership team were gathered from podcasts (e.g., *The Indian Silicon Valley Podcast* featuring Rohan Mirchandani), business news interviews (*Economic Times*, *YourStory*), and press releases.¹⁰ These sources provided the qualitative context regarding vision and strategy.
- **Case Studies:** Academic case studies (e.g., from Ivey Publishing) regarding Epigamia's marketing challenges were utilized to understand the theoretical frameworks applied by the company.¹⁵
- **Digital Footprint:** Analysis of social media engagement, influencer campaigns, and customer reviews on platforms like Amazon and BigBasket

provided insights into consumer sentiment and product reception.²³

3.2.2 Primary Data (Simulated/Proxy)

While a direct field survey was not conducted specifically for this report instance, the analysis integrates findings from existing consumer surveys and academic papers referenced in the research material.

- **Proxy Studies:** The report utilizes data from studies such as "Evaluating Consumer Engagement with Yoghurt Using Sampling Campaigns in Anand," which provides empirical data on consumer preferences for flavored yogurt, willingness to pay, and awareness levels.²⁴
- **Simulated Questionnaire Analysis:** A structured questionnaire framework (included in Appendix 1) was designed and analyzed based on typical industry responses to simulate the primary data collection process of an MBA project. This includes

analysis of demographic preferences, flavor choices, and price sensitivity.

3.3 LIMITATIONS OF THE STUDY

Despite the rigorous methodology, certain limitations exist:

1. **Private Company Data:** As a private limited company, Drums Food International is not legally required to publish detailed quarterly financial results (unlike listed companies). Financial analysis relies on annual filings and public statements, which may have a lag.
2. **Market Volatility:** The FMCG sector, especially Quick Commerce, is evolving rapidly. Data from 2024 is used as the baseline, but market dynamics in 2026 may fluctuate due to inflation or policy changes.
3. **Urban Bias:** The available data is heavily skewed towards urban metropolitan markets. Insights drawn may not be fully applicable to rural or deep Tier-3

markets where Epigamia's presence is negligible.

4. **Supply Chain Opacity:** Detailed operational data regarding specific wastage rates, exact cold chain costs, and distributor margins is proprietary and not publicly available. Estimates have been used based on industry standards.

CHAPTER 4

DATA ANALYSIS AND INTERPRETATION

4.1 MARKETING STRATEGIES

Epigamia's rapid ascent from a niche startup to a household name in urban India is a testament to its mastery of the marketing mix. Unlike traditional dairy companies that rely on mass media and commodity pricing, Epigamia adopted a premium, digital-first, and lifestyle-oriented approach.

4.1.1 PRODUCT: Innovation as a Differentiator

Epigamia's product strategy is anchored in **differentiation** and **rapid innovation**.

- **Category Definition:** They did not launch "curd"; they launched "Greek Yogurt." By focusing on the *process* (straining whey) and the *benefit* (high protein, zero preservatives), they created a new

category. This allowed them to step out of the price-sensitive "dahi" market and enter the value-driven "snack" market.

- **Health-Centric Value Proposition:** The product development directly addresses the pain points of the modern Indian consumer:
 - *Protein Deficiency:* Highlighting "8g Protein" on the front of the pack appeals to the fitness-conscious.
 - *Clean Label:* "No Preservatives" and "All Natural" claims build trust in an era of skepticism about processed foods.
 - *Gut Health:* The launch of **Lactose-Free Artisanal Curd** was a strategic masterstroke. It converted a medical necessity (lactose intolerance) into a lifestyle choice, allowing people to consume dairy without discomfort.¹⁶
- **Packaging Psychology:** Epigamia broke the "Category Code" of dairy packaging. While Amul and Mother Dairy used white/blue imagery

(signifying purity/milk), Epigamia used bold, vibrant colors (purple, deep blue, yellow). The packaging is modern, sleek, and designed to look good on Instagram, facilitating user-generated content.

4.1.2 PRICE: The Premium Positioning Strategy

Epigamia adopts a **Premium Pricing Strategy** (Skimming).

- **Price Point Analysis:**
 - **Epigamia:** ₹60 for a 90g cup.
 - **Nestle a+ Grekyo:** ₹35-40 for similar weight.
 - **Milky Mist:** ₹30-35.
 - **Standard Curd (Amul/Mother Dairy):** ₹15-20 (approx. prorated).
- **Strategic Rationale:** The premium is justified by the "Greek" manufacturing process (which requires 3x more milk to produce the same volume of yogurt)

due to straining) and the "Clean Label" promise.

- **Target Audience Filtering:** The high price point naturally filters the target audience to SEC A (Socio-Economic Class A) consumers in metros—those who prioritize health and taste over cost. This aligns with their distribution focus on premium retail and Quick Commerce.
- **Entry Barriers:** To lower the barrier to trial, Epigamia uses **promotional pricing** on Quick Commerce apps (e.g., "Buy 2 Get 1 Free" or "combo packs"). They have also experimented with smaller ₹25-30 SKUs in beverages to capture the mass-premium segment.²⁵

4.1.3 PLACE: The Omnichannel & Cold Chain Challenge

"Place" is the most complex P for Epigamia due to the requirement of an unbroken cold chain (0-4°C).

- **The Quick Commerce Revolution:** Epigamia is a primary beneficiary of the Quick Commerce boom (Blinkit, Zepto).

- *Insight:* Yogurt is an impulse snack. A consumer craving a healthy snack at 4 PM does not want to wait for Amazon's next-day delivery. 10-minute delivery solves this friction.
- *Data:* Approximately 45% of revenue comes from online/D2C channels, driven by Q-Commerce.¹⁹
- **Modern Trade dominance:** The brand is visible at eye-level shelves in premium chains like Nature's Basket, Foodhall, and Reliance Smart. This builds brand prestige.
- **General Trade (GT) Selectivity:** Unlike FMCG giants who spray products in every shop, Epigamia selects only "A-Class" Kirana stores with reliable refrigeration and electricity backup to prevent spoilage.
- **Supply Chain Model:** The company uses a "Hub

and Spoke" distribution model. Products move from the manufacturing plant (e.g., co-packer Schreiber Dynamix) to central mother warehouses (Cold Storage), and then to city-level distributors. Real-time monitoring is essential to prevent temperature excursions.

4.1.4 PROMOTION: Digital-First & Community Building

Epigamia's promotional strategy eschews traditional TV (heavy spend) for targeted Digital Marketing.

- **Influencer Marketing:** The partnership with **Deepika Padukone** was strategic. She is not just a face on a billboard; as an investor, her endorsement carries weight regarding the business's viability and health credentials. Beyond her, the brand utilizes hundreds of micro-influencers (fitness trainers, nutritionists, yoga instructors) to create authentic content.

- **Content Marketing:** Campaigns like "**Your Health Is In Your Hands**" focused on education. They didn't just sell curd; they explained *what* lactose intolerance is, creating a "pull" demand from consumers who realized their digestive issues had a solution.²⁶
- **Co-Branding & Pop Culture:** Collaborations with **Pocket Aces (FilterCopy)** integrated Epigamia into web series watched by millennials. The product was placed naturally in scenes (e.g., a character eating yogurt as a post-work snack), embedding it into the lifestyle of the target demographic.²⁷

4.2 DISTRIBUTION NETWORK & SUPPLY CHAIN MANAGEMENT

4.2.1 The Cold Chain Imperative

Managing a cold chain in India is notoriously difficult

due to high ambient temperatures, frequent power cuts, and poor road infrastructure.

- **Technology Integration:** Epigamia employs IoT (Internet of Things) sensors in their logistics network. These sensors track temperature in real-time during transit. If a truck's reefer unit fails or temperature rises above 4°C, alerts are sent to the operations team, preventing the delivery of spoiled goods.⁸
- **Shelf Life Management:** With a shelf life of only 15-20 days for fresh yogurt, the "Time to Market" must be under 48 hours. This requires an agile logistics network that operates 24/7.
- **The "Ambient" Pivot:** To mitigate cold chain risks, Epigamia has diversified into ambient products (Almond Milk, Ghee Spreads) that do not require refrigeration. This allows them to penetrate deeper into Tier-2 markets where cold chain infrastructure is weak.

4.2.2 Sustainability in Supply Chain Epigamia has initiated a "Plastic Neutrality" program. For every kilogram of plastic used in packaging, they fund the recycling of an equivalent amount. This is crucial not just for CSR but for brand image, as their target demographic is environmentally conscious.²⁸

4.3 COMPETITOR ANALYSIS

The yogurt market is becoming a "Red Ocean" with intense competition.

Table 4.1: Nutritional & Strategic Comparison

Feature	Epigamia	Milky Mist	Nestle a+ Grekyo	Mother Dairy
---------	----------	------------	------------------	--------------

Market Positioning	Premium Lifestyle / Fitness Snack	Value-for-Money Greek Yogurt	Trust / Family Dessert	Mass Market Traditional
Protein (per 100g)	High (~7-8g)	Moderate (~6-7g)	Moderate (~5-6g)	Low (~3-4g)
Texture	Very Thick, Creamy	Thick, Smooth	Smooth, Dessert-like	Traditional Curd
Price (90g approx)	₹60	₹30-35	₹35-40	₹25-30
Distribution	Strong in Metros &	Dominant in South	National (Deep Penetrati	National (Deep Penetrati

	Online	India	on)	on)
Marketing Focus	Digital, Influence rs, Innovation	Availability, Price, TV Ads	TV Ads, "Tasty Health"	Emotional Connection, Purity

Analysis:

- **Milky Mist:** The biggest threat in terms of product quality-to-price ratio. They offer a very similar texture at half the price, appealing to the "value-conscious" health seeker.
- **Nestle & Danone:** Global giants with deep pockets. They can sustain price wars and have massive distribution muscle. Nestle positions its Grekko more as a fruit dessert, whereas Epigamia holds the "high protein/fitness" ground.
- **Amul:** The sleeping giant. Amul has introduced high-protein buttermilk and lassi. If Amul

aggressively enters the Greek Yogurt spoonable category with a ₹25 price point, it could disrupt the entire market structure.

4.4 SWOT ANALYSIS

Table 4.4: SWOT Matrix

STRENGTHS (Internal)	WEAKNESSES (Internal)
1. First Mover Advantage: Synonymous with Greek Yogurt in India. 2. Brand Equity: Strong recall, celebrity backing (Deepika Padukone). 3. Innovation Engine: Fast R&D cycles (Lactose-free, Plant-based).	1. High Price Point: Limits TAM (Total Addressable Market) to top 5% of Indians. 2. Cold Chain Dependency: High logistics costs erode gross margins. 3. Short Shelf Life:

4. Digital Competence: Mastery of Quick Commerce and D2C channels.	Increases risk of spoilage and returns (expiry losses).
OPPORTUNITIES (External)	THREATS (External)
1. Tier-2 Expansion: Cities like Pune, Chandigarh, Indore represent the next wave of growth. 2. Plant-Based Boom: Veganism is growing; dominating this niche can yield high margins. 3. Snacking Occasion:	1. Commoditization: Competitors launching similar products at lower prices. 2. Input Cost Inflation: Rising milk and fruit prices squeeze margins. 3. Regulatory Changes: Stricter labeling laws or plastic bans could

Moving yogurt from "meal side" to "4 PM snack" increases consumption frequency. 4. B2B Institutional Sales: Partnering with corporate cafeterias, gyms, and airlines.	increase compliance costs. 4. Private Labels: Retailers (Reliance, BigBasket) launching their own house-brand Greek Yogurt.

4.5 CONSUMER BEHAVIOR ANALYSIS

Understanding the "Why" behind the purchase.

- **The "Guilt-Free" Indulgence:** Consumers crave sweets/desserts but feel guilty about sugar. Epigamia offers a "permissible indulgence." The flavored yogurt tastes like a dessert (Blueberry, Mango) but carries the "halo" of health (Protein, Probiotics).
- **Status Signaling:** Carrying a cup of Epigamia

(premium pricing, distinct packaging) serves as a subtle social signal of being health-conscious and modern, similar to carrying a Starbucks cup.

- **Demographic Profile:**

- *Age:* 24-35 years (Millennials/Gen Z).
- *Geography:* Metro cities.
- *Behavior:* Tech-savvy, shops on Blinkit/Zepto, follows fitness influencers, reads food labels.

CHAPTER 5

FINDINGS, RECOMMENDATIONS & CONCLUSION

5.1 FINDINGS

Based on the extensive research and data analysis conducted, the following key findings characterize Epigamia's current market position:

1. **Successful Category Creation:** Epigamia has successfully transitioned Greek Yogurt from an obscure western concept to a recognized snacking category in Urban India. It has effectively educated the consumer on the benefits of "strained yogurt" (High Protein).
2. **Digital-First as a Strategy, Not Just a Tactic:** The brand's reliance on digital channels and Quick Commerce is not just a marketing choice but a core

business strategy. It aligns perfectly with the perishable nature of the product and the impulse-driven purchasing behavior of its target audience.

3. **Profitability Pivot:** The company has matured from a "growth-at-all-costs" startup to a sustainable business. The recent focus on unit economics, reducing burn rate, and achieving operational breakeven indicates a shift towards long-term viability.²⁹
4. **Distribution Wall:** The brand faces a "Distribution Wall" beyond the top metros. The lack of reliable cold chain infrastructure in Tier-2/3 cities creates a natural barrier to expansion for its fresh products. This necessitates a different product strategy (ambient products) for these markets.
5. **Competitive Moat under Siege:** While Epigamia has a strong brand, its product advantage is eroding. Competitors like Milky Mist and private labels are offering similar quality at 30-40% lower prices. Epigamia's premium pricing is sustainable

only if it continues to innovate (e.g., Plant-based, Lactose-free) and maintains superior brand desirability.

5.2 SUGGESTIONS / RECOMMENDATIONS

To navigate the competitive landscape and sustain growth through 2026-2030, the following strategic recommendations are proposed:

1. Strategic Expansion into "Ambient" Dairy:

To bypass the cold chain constraints of Tier-2 and Tier-3 cities, Epigamia should aggressively expand its range of ambient (shelf-stable) products.

- *Idea:* Launch UHT Protein Shakes (shelf-stable) or ambient yogurt snacks (like yogurt bars) that can be sold in general trade stores without refrigeration. This unlocks the mass market.

2. The "Cluster" Approach for Tier-2 Expansion:

Instead of a scattered launch, Epigamia should adopt a "Cluster Strategy" for expansion.

- *Execution:* Identify high-potential Tier-2 cities (e.g., Indore, Surat, Kochi) based on Quick Commerce data. Launch deeply in *one* city at a time, establishing a local cold-chain hub and saturating the market before moving to the next. This ensures logistics efficiency.

3. Price-Pack Architecture (PPA) Optimization:

The ₹60 entry barrier is too high for mass adoption.

- *Idea:* Introduce a smaller "Trial Pack" (e.g., 50g at ₹25) specifically for Quick Commerce and college canteens. This encourages trial among students and first-time users who are hesitant to spend ₹60 on a new product.

4. Strengthen the "Plant-Based" Leadership:

As the dairy market gets crowded, the plant-based (vegan) market is still open.

- *Strategy:* Double down on Coconut and Almond yogurt. Position Epigamia as the *default* choice for vegans and the lactose-intolerant. This is a high-

margin, low-competition niche that aligns with global trends.

5. B2B Institutional Partnerships:

Reduce reliance on retail by securing bulk B2B contracts.

- *Partnerships:* Partner with premium coffee chains (Starbucks, Blue Tokai, Third Wave Coffee) to stock Epigamia as a breakfast option. Partner with corporate cafeterias of MNCs (Google, Microsoft offices in India) to offer Epigamia in their snack vending machines.

5.3 CONCLUSION

Epigamia (Drums Food International) stands as a beacon of innovation in the Indian food industry. It has successfully challenged the dogma that Indian consumers are price-sensitive and won't pay a premium for value-added products. By combining a superior product (Greek Yogurt) with modern

storytelling and agile distribution (Quick Commerce), it has built a brand that is loved by millions.

However, the "startup phase" is over. Epigamia is now entering the "scaling phase," where it faces the giants of the industry. The battle for the next ₹500 Crore in revenue will be fought not just on Instagram, but in the supply chains of Tier-2 India and on the shelves of neighborhood kirana stores.

The company's ability to maintain its premium allure while expanding its footprint, managing volatile input costs, and fending off lower-priced competitors will determine its future. If it can successfully navigate the transition from a "Niche Metro Brand" to a "National Healthy Snacking Brand," Epigamia has the potential to become the "Chobani of India"—a billion-dollar dairy powerhouse.

APPENDICES

APPENDIX 1: CONSUMER SURVEY QUESTIONNAIRE (SIMULATED)

This questionnaire is designed to understand consumer behavior regarding yogurt consumption and brand awareness of Epigamia.

Section A: Demographics

1. **Name:** _____
2. **Age Group:** ☐ 18-24 ☐ 25-34 ☐ 35-44 ☐ 45+
3. **City:** ☐ Mumbai ☐ Delhi ☐ Bangalore ☐ Other:

4. **Occupation:** ☐ Student ☐ Salaried Professional ☐
Business ☐ Homemaker

Section B: Consumption Patterns

5. How often do you consume yogurt/curd?

☐ Daily with meals ☐ As a snack (2-3 times a week) ☐
Rarely ☐ Never

6. Are you aware of the difference between Regular

Curd and Greek Yogurt?

☐ Yes, Greek Yogurt is strained/thicker/higher protein

☐ No, I think they are the same

7. What is your primary motivation for buying packaged yogurt?

☐ Convenience ☐ Health/Protein ☐ Taste/Dessert ☐

Lactose Intolerance

Section C: Brand Preferences

8. Which brand of yogurt do you prefer?

☐ Amul ☐ Mother Dairy ☐ Epigamia ☐ Nestle a+ ☐

Milky Mist

9. Have you tried Epigamia Greek Yogurt?

☐ Yes ☐ No

10. (If Yes) Which flavor is your favorite?

☐ Natural ☐ Blueberry ☐ Alphonso Mango ☐

Strawberry

11. How do you rate the pricing of Epigamia (approx. ₹60/cup)?

☐ Value for Money ☐ Slightly Expensive but worth it ☐ Too Expensive

12. Where do you usually purchase Epigamia from?

☐ Local Kirana Store ☐ Supermarket
(Reliance/Nature's Basket)

☐ Quick Commerce Apps (Blinkit/Zepto/Swiggy)

Section D: Suggestions

13. What new product/flavor would you like to see from Epigamia?

APPENDIX 2: KEY FINANCIAL METRICS (ESTIMATED)

- **Revenue (FY 2024):** ~₹180 Crore ²¹
- **Total Funding Raised:** ~\$81 million (across Series A, B, C, Debt) ³⁰
- **Major Investors:** Verlinvest, Danone Manifesto Ventures, DSG Consumer Partners, Deepika Padukone.
- **Sales Channel Split:** ~55% Offline Retail, ~45% Online/D2C ¹⁹
